Outline

- CAFA.
- Background: RNA and RNA binding proteins.
- Background: datasets.

Definition

- **RNA/DNA Binding Protein prediction**: given a protein, determine whether a protein is RNA/DNA binding.
- **RNA/DNA binding site prediction**: given a protein sequence, determine side chains that bind with a DNA/RNA.
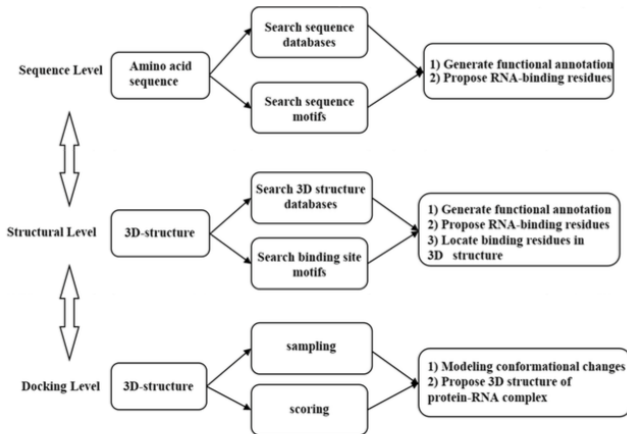

Methods: abstraction level

Figure 1. Strategies for RNA-binding site and RBP prediction.

Possible Features

Sequence-based features:

- **Amino acid composition**.
- **Sequence similarity,** such as MSA.
- **Evolutionary invormation,** such as PSSM.
- **Evolutionary invormation,** such as PSSM.

Structure-based features:

- **Secondary structure:** experimental (assigned using DSSPcont) or predicted.
- **Accessible surface area,** in percnent (%).

Chemical and physical features:

- **Hydrophobicity.**
- **Electrostatic patches.**
- **Cleft Size.**

Methods: previously used algorithm

- **Naive Bayes (NB)** classifier.
- **Support Vector Machine (SVM)**.
- **Random Forest**.
- **Neural Network (NN)**.
